

HAIR TESTING

EXTEND YOUR WINDOW OF DETECTION

Hair Testing offers the following advantages:

- Non-intrusive sample collection with less risk of sample tampering
- Long detection windows: drugs remain detectable from 1 week up to 6 months after use
- Highly sensitive drug detection for drugs of abuse and anabolic steroids
- Admissible in court proceedings

What should be tested - hair, oral fluid or urine?

Drugs are detected in a number of sample types for different lengths of time.

ORAL FLUID has the shortest detection window and indicates the most immediate evidence of drug use, with detection from 6 hours to 24 hours, depending on the drug.

URINE offers longer detection windows, with some drugs detected for up to 10 days after use.

HAIR can detect drug use over an extended period, and provides evidence of chronic use. Traces can be detected after 7 days and can remain for up to 6 months, depending on the length of hair.

Choose the right drug testing sample for you, depending on whether you wish to control drug use in the work place or ensure total abstinence.

HASTA IS NATA ACCREDITED FOR TESTING HUMAN URINE, ORAL FLUID AND HAIR GIVING YOUR WORKPLACE CLIENTS A FULL RANGE OF TESTING OPTIONS

What do we test for?

Our Drugs of Abuse screen includes over 60 drugs from the following classes:

Opiates & Opioids;

e.g. morphine, codeine, heroin, methadone, oxycodone, hydrocodone

Stimulants & hypnotics;

e.g. cocaine, methamphetamine (ice), MDMA (ecstasy), LSD

Benzodiazepines and sedatives;

e.g. diazepam, flunitrazepam and zolpidem

Cannabinoids and synthetic cannabinoids;

e.g. THC and AB-Fubinaca

Designer Drugs;

e.g. synthetic cathinones such as MDPV & mephedrone

Non-steroidal anabolic drugs;

e.g. clenbuterol

Our Anabolic Steroid screen includes more than 40 known steroids

Sensitive detection of anabolic steroids and their esters* in hair at 5 - 20 pg/mg from a 20 mg hair sample

*Please note that the detection of anabolic steroid esters rules out the "endogenous argument" in any disciplinary hearings

Why choose HASTA for hair testing?

HASTA is a division of RASL, the largest independent forensic drug testing laboratory in Australia

NATA Accredited to ISO 17025

Expert advice from experienced human drug testing analysts

Only Australian laboratory currently able to test for drugs of abuse and steroids in hair

Rapid turnaround time

Competitively priced, tested in Australia, billed in \$AUD, no exchange rate or shipping issues
